GRIP THE WORLD'S BEST CLIMBERS HAVE INSPIRED THIS SOLE

Incredible climbers. Even the smallest ledge is enough for an ibex to find a secure footing. The secret behind it is their hooves. The unique combination of horn and skin results in the perfect symbiosis of hold and adhesion.

INSPIRED BY NATURE

MEGA CUSHIONING FOR REACTIVE COMFORT

The low-density EVA Mega-Cushioning midsole ensures a cushioned landing and a more explosive take-off. This makes walking smooth and secure on all types of terrain. In the URBAN TRAIL CIRCULAR shoe, the midsole is made entirely of recycled EVA.

URBAN TRAIL IBEX

NEW

STRATEGICALLY WATERPROOF
MEMBRAN 115®

Patented Membrain 115® integrated directly into the knit provides water protection in key areas of the foot.

FOR REACTIVE COMFORT

RUNNING SHOES

UYN®

UNLEASH YOUR NATURE

THE SHOE THAT RUNS WITH YOUR MIND

A NEW RUNNING SHOE CONCEPT

**WE INVENTED THE FIRST
NEURO-REACTIVE SHOE**

A NEW RUNNING
SHOE CONCEPT

WE DID NOT SETTLE FOR A REACTIVE SHOE

UYN running shoes are developed with a revolutionary approach that establishes the supremacy of the mind over the muscles. **Shoes are no longer considered a simple tool external to the body, but become an extension of the mind**, an interface that works in perfect synergy with the neuro-muscular system - the system that takes in information through our senses and triggers the reaction of the muscles.

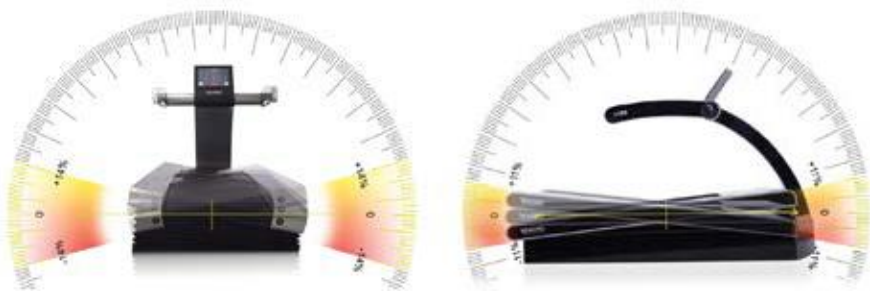

Thanks to this new study methodology, we have created the first neuro-reactive running shoes featuring an innovative structure that guarantees **superior stability and optimal movement control**, especially in the unpredictable conditions we face when running outdoors. The mission of UYN shoes is to help improve the quality of running, not just the quantity - for us this means better performance.

STATE-OF-THE-ART TECHNOLOGY

NEW IDEAS NEED NEW TOOLS

To test our shoes, we used a state-of-the-art treadmill developed by the Italian company Reaxing. Unlike traditional treadmills, **Reaxing platform** is able to incline in all directions in a sudden and unpredictable way, reproducing the typical interference of outdoor running.

Specifically designed for neuro-reactive training, this treadmill allowed us to study in the laboratory, therefore in a controlled environment, what happens in the outdoors. Thus we gathered valuable data before executing tests on the field.

The Power Chassis platform comes in two different levels of rigidity. More rigid for maximum energy return; more flexible for torsional stability and protection on uneven terrain. We use higher rigidity in road running shoes while we favour flexibility in trail running and cross trail shoes.

H.A.L.O. POWER CHASSIS TORSIONAL STABILITY AND ENERGY RETURN

Connected with the **H.A.L.O. is the Power Chassis**, a rigid platform built into the midsole. The Power Chassis makes the shoe more torsionally rigid and offers superior energy return for a smoother, dynamic run.

TWO LEVELS OF RIGIDITY FOR EVERY RUNNING STYLE

HIGH RIGIDITY

Maximum energy return, propulsion of the foot forward for great performance. Ideal for road running.

LOW RIGIDITY

Torsional stability of the shoe, greater protection from jagged rocks, stones and tree roots on rough terrain. Ideal for trail running and cross.

CUSHIONING
FREEBOUND®
HEEL. BECAUSE
WE ALL LAND
DIFFERENTLY

A foundation for performance, never seen before. The Freebound heel is reacting to your unique running style. It compresses horizontally and vertically and allows the heel to balance with every step.

LOW-RIGIDITY POWER CHASSIS

Designed for torsional stability, it offers greater protection on uneven ground, so stones, rocks and roots don't make you lose your focus

WEAVY RIBS

The tread design is designed to distribute impact forces laterally and give the right traction on the road

UYN Compression Fly is the revolutionary sock/shoe developed for comfort and speed in trail running, when paved roads give way to gravel trails. The sock with three levels of compression promotes blood circulation and increases the feeling of energy and wellbeing while running. The neuro-reactive sole guarantees high stability and maximum running efficiency. Ultra-light and breathable, the Compression Fly shoe is to be worn without socks to appreciate the extraordinary ventilation.

UYN INSOLES DESIGNED FOR YOUR FEET

The UYN Compression running line features two types of insoles. The **Powerspeed insole**, inside the shoe, for maximum combination of comfort and responsiveness; the **Memoryspeed insole**, supplied in the shoe box and interchangeable with the first, for those with slim feet and looking for more cushioning.

POWERSPEED INSOLE COMFORT AND RESPONSIVENESS

High-density polyethylene foam footbed, engineered to combine comfort and responsiveness. The channel system built into the structure uses running dynamics to create an air flow inside the shoe and enhance ventilation. The recycled microfibre in contact with the foot dries sweat quickly.

MEMORYSPEED INSOLE KEEPS PERFORMANCE IN MEMORY

High-comfort footbed with memory foam that adapts to the natural shape of the foot, absorbs shock and supports functionality during running. The air cell structure promotes foot ventilation, while the recycled microfibre in contact with the skin quickly absorbs sweat. Ideal for those with a slimmer foot morphology and looking for extra cushioning.

RUNNING/HIKING COMPRESSION FLY SHOES

ZEROCUFF

NO ELASTIC BAND FOR MORE POWER

The sock stays in the perfect position without the need for the double elastic band that traditionally tightens the leg and leaves marks on the skin. The ZeroCuff technology promotes blood circulation and comfort during running.

FOR REACTIVE COMFORT

H.A.L.O SYSTEM

The low-density EVA Mega-Cushioning midsole ensures a cushioned landing and a more explosive take-off. This makes walking smooth and secure on all types of terrain.

The UYN® Compression Fly is a revolutionary shoe with socks. Designed for speed and comfort in trail running, when paved roads give way to gravel trails. The socks offer three compression levels: light compression on the leg, for a better blood flow; medium compression on ankle that provides stability while running; strong compression on foot to give power at every step. The ultra-breathable zero-seam upper respects the natural shape of the foot and delivers a wrap-around fit with no pressure points. The H.A.L.O system connected with the Power Chassis platform provides superior stability on directional changes and uneven terrain. Experience the responsive cushioning of the Freebound Heel structure with the new Propulsyon foam for blazing trails at lightning speed.

45.5 46 46.5 47 47.5 48

Running will never be the same with the revolutionary UYN COMPRESSION RUNNER'S ONE: the shoe designed with all benefits of socks. Thanks to the innovative ZEROCUFF technology, the sock remains perfectly adherent to the leg without the need of the classic cuff. The lack of restrictions on the calf allows a better blood circulation exponentially increasing the performance and comfort of the foot. Engineered from the sock using Flexicorn bio-fibre from corn seeds, it offers exceptional ventilation, stability and support. The combination of the rigid Power Chassis platform with the ultra-light Propulsyon foam delivers reactivity and propulsion with every stride.

Strategically waterproof

Built directly into the knit, our intelligent membrane prevents water from passing through while remaining highly elastic and breathable at the same time.

ERGOFRAME

Support all around

High-performance lacing system. Stabilises the foot laterally without constriction.

MADE WITH MERINO WOOL

Thanks to the natural fibre structure, Merino wool effectively traps air, creating a thermo-regulating effect: it warms when it's cold, cools when it's hot. At the same time, it disperses sweat and neutralises the formation of unpleasant odours.

A.S.T. SYSTEM

Ankle stabilisation system

Connected to the shoe lacing and integrated into the soft collar, the A.S.T. (Ankle Stabilisation Technology) is developed to wrap, protect and stabilise the ankle without pressure points. Its structure helps prevent unwanted lateral movements that can lead to injuries, while at the same time it does not put restrictions on normal walking dynamics.

FREEBOUND HEEL

Responsive cushioning

The heel reacts to your running style. It absorbs impacts and gets you ready to move forward.

H.A.L.O SYSTEM

Ultimate lateral stability

The H.A.L.O system stabilises the heel and steers the foot into a neutral path from the very first roll-off movement.

TOE GUARD

Protects your runs

The toe cap is reinforced to increase stability and abrasion resistance.

Pushing you forward

A perfect match of cushioning and responsiveness to give a propulsive feeling as you move forward.

HIGH TECH ON YOUR FEET

UYN® PATHWAY HIGH / MID

OFFSET: 6 MM

GRUBBERS LUGS

Rubber lugs with a depth of 4 millimetres. The design is developed to ensure the best grip on unstable and muddy terrain, while at the same time making cleaning easier.

LOW-RIGIDITY POWER CHASSIS

Designed for torsional stability, it offers greater protection on uneven ground, so stones, rocks and roots don't make you lose your focus

UYN® PATHWAY HIGH is the lightweight, durable, stable and responsive hiking shoe. Developed from the sock by studying the reactions of the neuro-muscular system, it guarantees a smooth walk and helps reduce foot fatigue. The A.S.T. and H.A.L.O systems stabilise the ankle and heel, protecting you when moving sideways. The upper made of high-quality Merino wool keeps the foot at the ideal temperature and free from sweat, while the patented Membrain115 membrane provides protection from water at strategic points.

RUNNING/HIKING PATHWAY HIGH

STRATEGICALLY WATERPROOF MEMBRAN 115®

Patented Membrain 115® integrated directly into the knit provides water protection in key areas of the foot.

FOR REACTIVE COMFORT H.A.L.O. SYSTEM

The low-density EVA Mega-Cushioning midsole ensures a cushioned landing and a more explosive take-off. This makes walking smooth and secure on all types of terrain.
