

WORKBOOK

SOCKS

FALL WINTER 2023/24

ZEROCUFF TECHNOLOGY

WE REMOVED THE WEIGHT IN YOUR LEG

- **NO SLIPPING DOWN**
Perfect hold during training and races
- **NORESTRAINTS**
Superior anatomical comfort
- **BOOSTS BLOOD CIRCULATION**
No restrictions on blood flow
- **LEGS FEEL LIGHTER**
Improved blood circulation, reduces fatigue and increases foot sensitivity inside the shoe

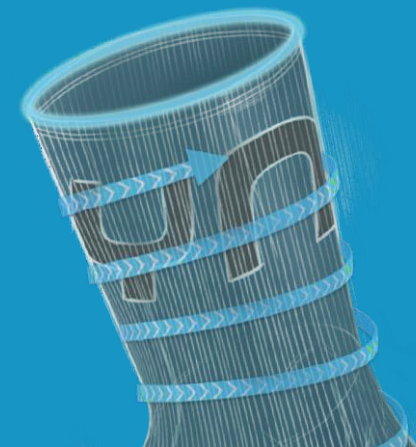

CONVENTIONAL SOCK WITH CUFF

- TIGHTENS THE LEG
- LEAVES MARKS ON THE SKIN
- OBSTRUCTS BLOOD CIRCULATION

UYN® SOCK WITH ZEROCUFF TECHNOLOGY

NO ELASTIC ON THE TOP

HIGH-FIVE TECHNOLOGY

COMFORT AND PERFORMANCE MULTIPLIED BY FIVE

Thanks to High-5 technology, the toe of the sock is shaped to accommodate each toe in an ergonomic and extraordinarily functional way. Each toe is wrapped in a soft, seam-free terry structure, complemented with micro-holes for ventilation.

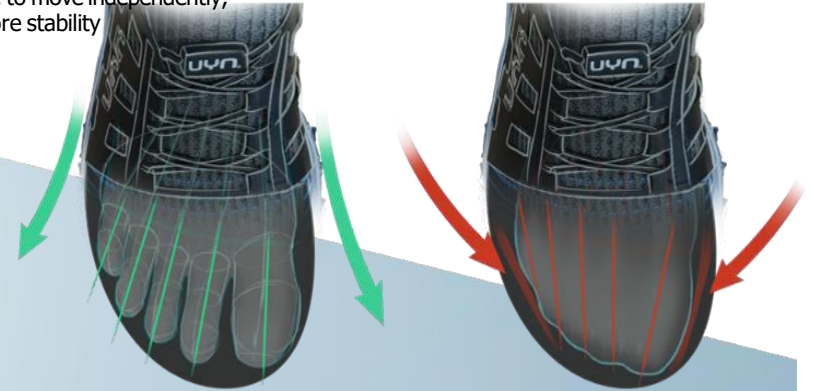

1 SECOND-SKIN EFFECT
The sock fits the foot perfectly.
No creases or fabric build-up

2 LESS RISK OF BLISTERS
Toes do not rub against each other

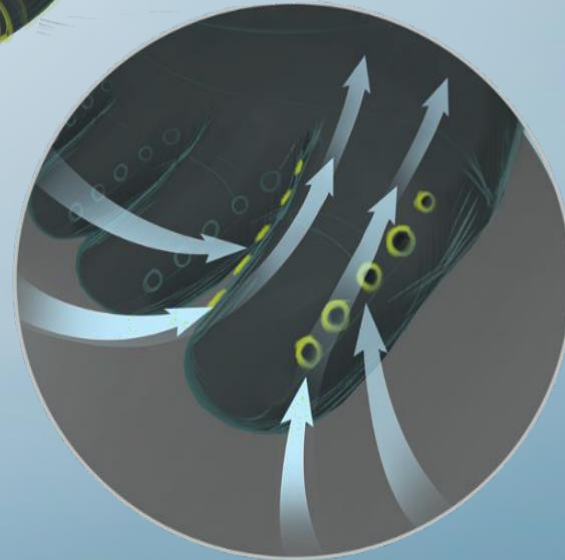

3 MORE NATURAL POSTURE
Toes fill up the toe box of the shoes better

4 EXTRA TRACTION DURING PUSH-OFF AND LANDING
Toes are free to move independently, providing more stability

5 INCREASED VENTILATION
Micro-holes allow air to circulate. Less sweat between the toes, where bacteria nest

TARGET COMPRESSION BANDAGE

BREATHABLE SUPPORT

Double asymmetric bandage with perspiration integrated. For localized compression exactly where needed.

ANTI IMPACTOR

SMART PROTECTION

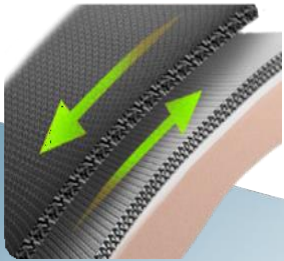

Frontal shock-absorbent 3D knitted structure that simultaneously guarantees efficient foot ventilation.

DOUBLE LAYER SYSTEM

PREVENTS FRICTION THAT CAN LEAD TO BLISTERS

The friction occurs between the two layers, while the inner layer is tight against the skin.

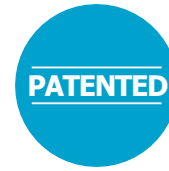

OUTER LAYER

- Highly breathable
- Durable
- Shock absorbing

INNER LAYER

- Ultra - thin
- Glove - like fit
- Perfectly adapted to the shape of the foot

COOL AIR FLOW

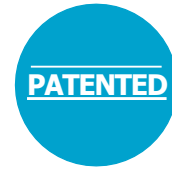

WELL VENTILATED FEET

3D micro-channel structure for air circulation; keeps feet dry and at a comfortable temperature.

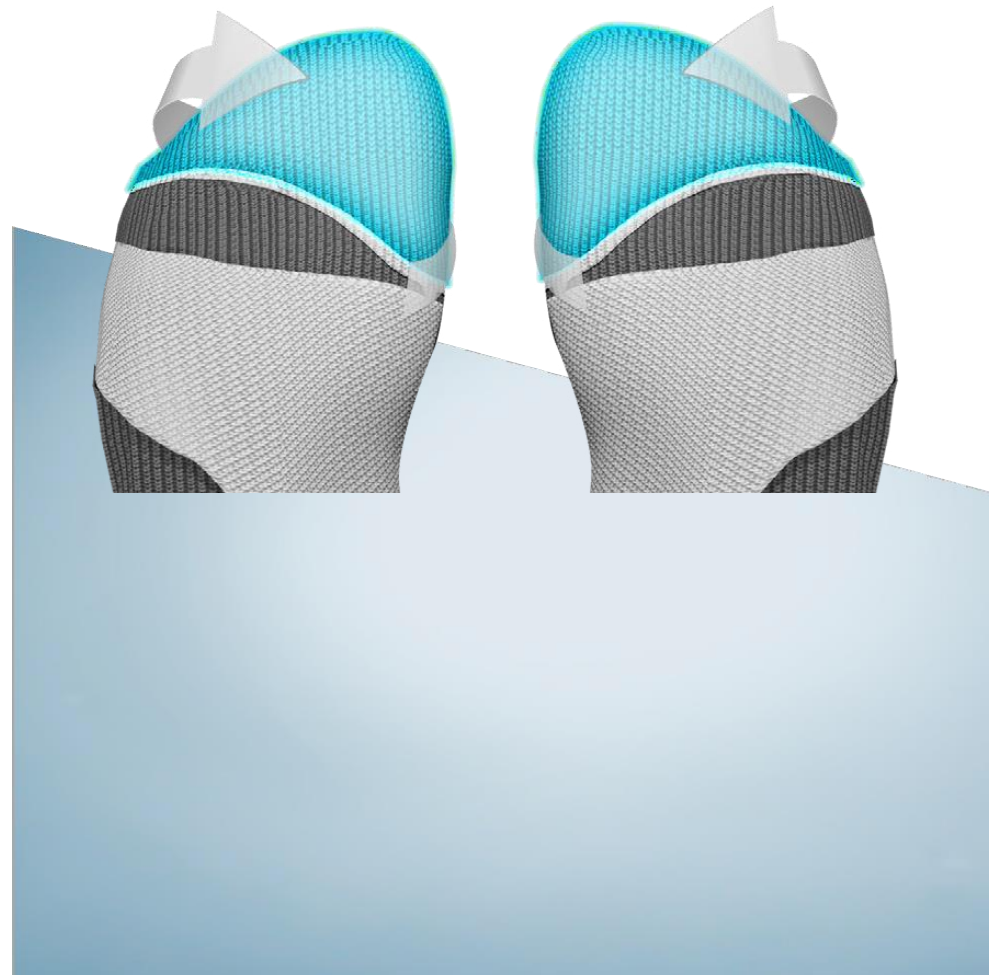

ERGOLOGIC FOOTBED

Anatomically shaped footbed for athletic stresses and movement.

ASYMETRICAL TOE

Anatomically shaped insole for athletic performance.

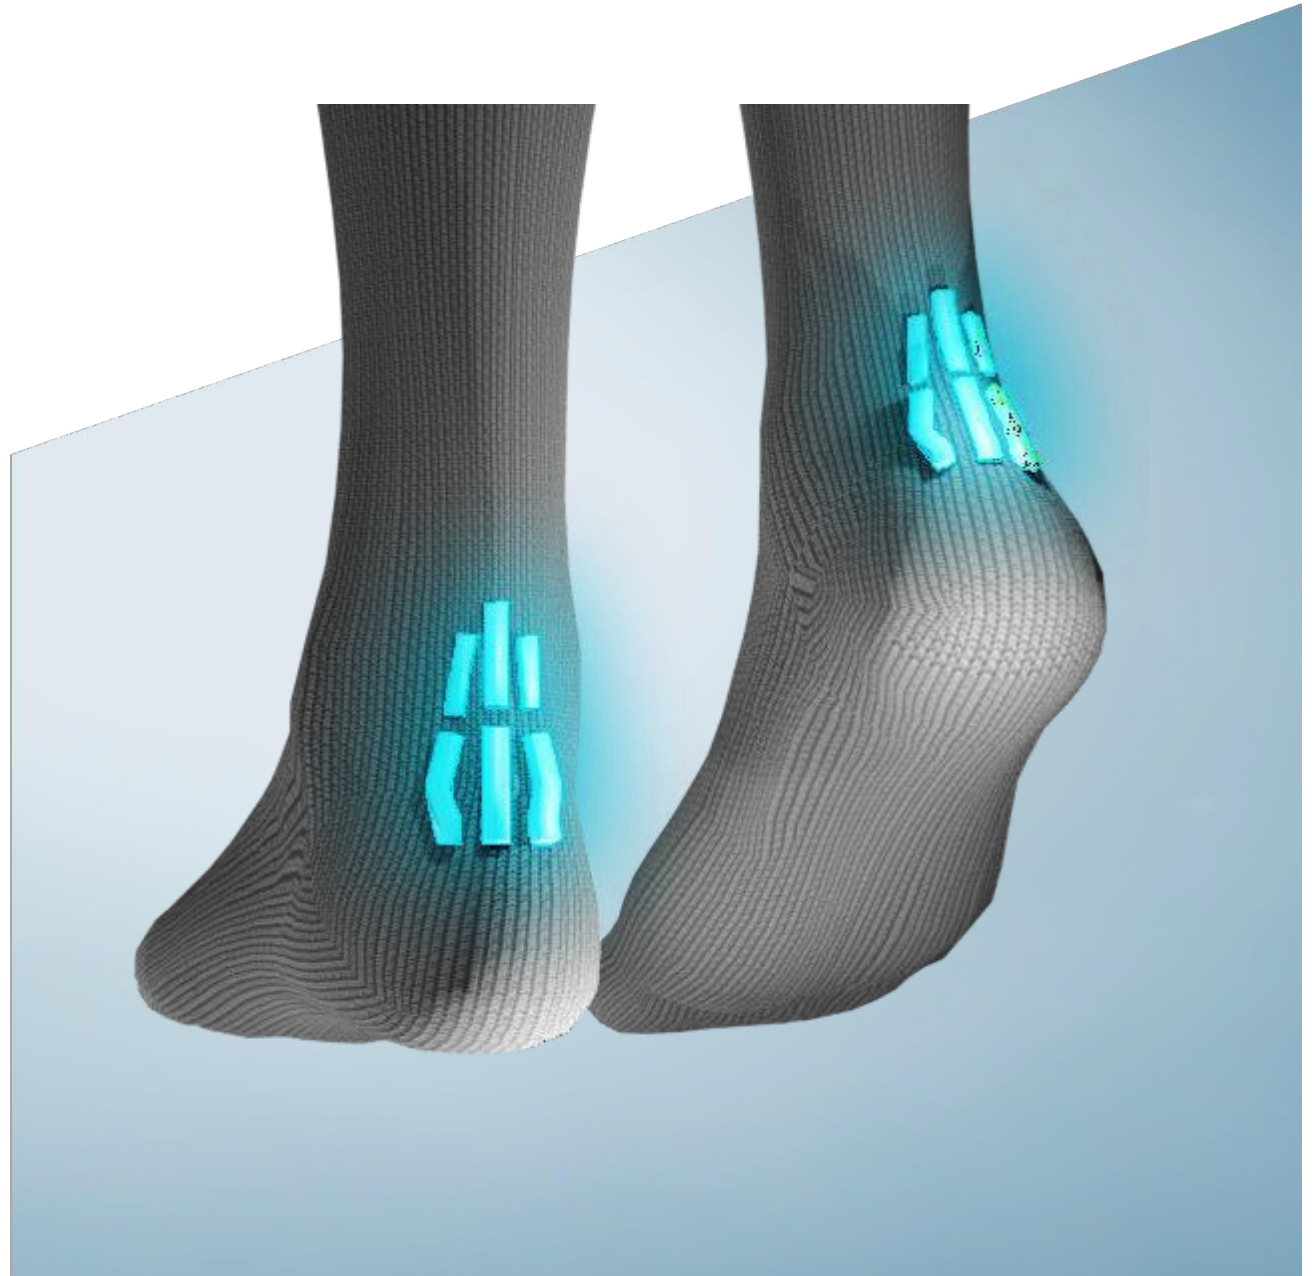

PRESHOCK SHIELD

SHOCK ABSORBING TECHNOLOGY

Absorbs shocks and protects the sensitive Achilles tendon with a 3D knitted structure.

MADE OF MATERIALS THAT PERFORM, NATURALLY.

REDUCING OUR ENVIRONMENTAL IMPACT HAS BEEN A TOP PRIORITY SINCE DAY ONE. NATURAL FIBERS ARE RENEWABLE, AND INHERENTLY BIODEGRADABLE. REPLACING PETROLEUM-BASED MATERIALS WITH NATURAL ONES, AND INVENTING ALTERNATIVES THAT DON'T YET EXIST IS ONE OF OUR DAILY CHALLENGE.

MERINO WOOL

A MIRACLE OF NATURE

Merino wool is thinner and softer than regular wool. Its structure retains air, insulating the body from the outside and helping it to maintain a stable temperature.

NATEX

FROM CASTOR OIL SEEDS

Derived from castor oil seeds, NATEX fibre reduces garment weight by 25%, dries 50% faster than petroleum-based polyamide, is more elastic and minimises odour.

BIOLIGHT

IMPROVED BREATHABILITY

Derived from the cellulose of beech plants, BIOLIGHT fibre is highly breathable and retains twice as much moisture as cotton.

COOLTH_S

THE BIO-FIBRE WITH BUILT-IN AIR CONDITIONING

COOLTH_SL is a highly hygroscopic fibre, which means it has the natural capacity to absorb moisture produced by the body and leave the skin cool and dry.

KAPOK

NATURAL THERMAL INSULATION

Kapok is the world's lightest natural fibre. Composed of 80% air, it traps a large amount of body-warmed air thus creating a natural insulating barrier.

FLEXICORN

THE SUSTAINABLE ALTERNATIVE TO ELASTANE

Plant-based bio-polyester from corn seeds. Extraordinarily elastic and resilient, it keeps its original shape longer.

ECOLYPT

KEEPS YOU SWEAT AND ODOR-FREE

Derived from Eucalyptus tree, ECOLYPT is composed of very small hydrophilic fibers that absorb moisture. In addition, the fiber is highly breathable and inhibits odors.

The first bio-tech ski socks for race performance. 80% made from kapok, the world's lightest natural fibre, and plant-based materials, Ski One Biotech socks fit the feet like a secondskin and boost their natural functions. Kapok provides extraordinary thermoregulation, Biolight fibre from the beech tree increases durability and breathability. Natex from castor oil seeds makes the sock 50% faster drying. The result is perfect temperature management for feet that are always dry and ventilated. Ski One Biotech socks are made with Zerocuff technology, without elastic at the top, for superior comfort and improved blood circulation.

UYN ONE ski socks encompass all the features you need to blaze down the slopes at the best of your ability. Designed using the innovative ZEROCUFF technology, they ensure a perfect fit on the calf without obstructing blood circulation and without leaving marks. This increases sensitivity and decreases foot fatigue, giving you a better feeling and perception in the boot. The use of High quality Merino wool makes UYN ONE ski socks extremely soft and thermoregulating, ensuring exceptional comfort and warm feet even on the coldest days.

The dynamic wave design characterized the new Natyon ski socks, ensuring increased support and performance thanks to the innovative Zerocuff technology. To boost protection and shock absorption, UYN has introduced the Shockwave system which distributes pressure along specific 3D lines. With the Cool Air Flow technology, they can keep the microclimate around your feet just right, even when the temperature is low.

Multiply performance by five. UYN® TREKKING FIVE socks with five toes feature UYN®'s cutting-edge systems for ergonomics, shock absorption and internal temperature management and enhance them via the new HIGH-5 technology. With these socks, the toes are free to assume their natural position and release more force when push-off and landing. The sock is even more stable and close-fitting, like a second skin. Ventilation micro-holes at each toe, combined with Cool Air Flow channels, increase air circulation around the foot, providing a unique feeling of freshness, even during the longest and most demanding races.

Maximum protection, maximum comfort, all in one sock. UYN BIOTREK HEAVY DUTY are the socks that combine high performance with a unique feeling of well-being thanks to the use of innovative bio-materials. The properties of fine Merino wool are enhanced by the Kapok plant fibre, the lightest in nature, to ensure perfect thermoregulation even on the coldest days. The Natex fibre from castor beans neutralises odours and helps to keep feet dry on high altitude hikes.

On the approach to a wall or glacier, along the trails that lead to the climb, maximum foot comfort is vital. UYN created the Trekking Approach socks precisely to guarantee a product that combines perfectly with a light but robust approach shoe. The 3D structure of the fabric in these socks provides targeted protection for sensitive areas such as the Achilles tendon (Preshock Shield) and the top of the foot (Anti-Impactor). Meanwhile, the Cool Air Flow technology's 3D micro-channels allow air to circulate between skin and fabric, making the temperature just right. The perfect mix of the quick-drying Natex bio-fibre and precious Merino wool make the UYN Trekking Approach socks perfect for Autumn outings and temperatures that are beginning to drop.

1 HIGH-FIVE TECHNOLOGY

Thanks to High-5 technology, the toe of the sock is shaped to accommodate each toe in an ergonomic and extraordinarily functional way. Each toe is wrapped in a soft, seam-free terry structure, complemented with micro-holes for ventilation

2 ZEROCUFF

No elastic at the top. The sock does not tighten the leg, leaves no marks on the skin and promotes blood circulation for better performance

3 COOL AIR FLOW

3D micro-channel structure for air circulation; keeps feet dry and at a comfortable temperature

4 ANTI-IMPACTOR

Frontal shock-absorbent 3D knitted structure that simultaneously guarantees efficient foot ventilation

5 ERGOLOGIC FOOTBED

Anatomically shaped footbed for athletic stresses and movement

6 TARGET COMPRESSION BANDAGE

Double asymmetric bandage with perspiration integrated. For localized compression exactly where needed

7 PRESHOCK SHIELD

Absorbs shocks and protects the sensitive Achilles tendon with a 3D knitted structure

Multiply performance by five. UYN® RUNNER'S FIVE socks with five toes feature UYN®'s cutting-edge systems for ergonomics, shock absorption and internal temperature management and enhance them via the new HIGH-5 technology. With these socks, the toes are free to assume their natural position and release more force when push-off and landing. The sock is even more stable and close-fitting, like a second skin. Ventilation micro-holes at each toe, combined with Cool Air Flow channels, increase air circulation around the foot, providing a unique feeling of freshness, even during the longest and most demanding races.

Running will never be the same with the revolutionary UYN RUNNERS ONE socks. Thanks to the innovative ZEROCUFF technology the sock remains perfectly adherent to the leg without the need of the classic cuff. The lack of restrictions on the calf allows a better blood circulation exponentially increasing the performance and comfort of the foot. UYN RUNNERS ONE has been designed to offer you not only unbeatable performance and comfort but also protection. The 3D structure PRESHOCK SHIELD in the back and the ANTI-IMPACTOR construction on the sole absorbs impacts keeping safe all the sensitive and delicate areas of the foot.

RUN 2IN ONE

PREVENTS FRICTION THAT CAN LEAD TO BLISTERS

DOUBLE LAYER

The friction occurs between the two layers, while the inner layer is tight against the skin.

MAN B116 BLACK/TURQUOISE

WOMAN G658 GREY MELANGE/
LIME GREEN

- 1 **DOUBLE PULLER CUFF**
Anatomically-shaped cuff raised at the front and back so it stays firmly in place without areas of uncomfortable tightness
- 2 **PRESHOCK SHIELD**
Absorbs shocks and protects the sensitive Achille's tendon with a 3D knitted structure
- 3 **ANTI-IMPACTOR**
Frontal shock-absorbent 3D knitted structure that simultaneously guarantees efficient foot ventilation
- 4 **DOUBLE BANDAGE**
Double asymmetric bandage with perspiration integrated. For localized compression exactly where needed
- 5 **COOL AIR FLOW**
3D micro-channel structure for air circulation; keeps feet dry and at a comfortable temperature
- 6 **ERGOLOGIC FOOTBED**
Anatomically shaped footbed for athletic stresses and movement
- 7 **INCREASED BREATHABLE AREAS**
The fabric's open channel structure creates areas of increased breathability. This allows moisture to be wicked out of the sock's inner layer and to evaporate - all thanks to the Cool Air Flow system

USD 25,00

Running long distances carries with it significant stress on the feet. The 2IN Running sock's Two Layer system delays the onset of feelings of fatigue. This guarantees optimum comfort and prevents blisters from forming. The ergonomic design and double bandage around the ankle allow the sock to stay firmly in position and to provide support for your feet as you run. The Cool Air Flow technology traps air between two layers to create an insulating effect that keeps the temperature on the surface of the feet at a constant. Areas with increased breathability allow moisture to be wicked away. This leaves runners' feet feeling good even after many miles.

Intensive running sessions ahead? Then Compression ONE socks from UYN® are your perfect companions. The zerocuff technology improves the oxygen supply to stressed muscles and thus also increases efficiency. Thanks to their structure, the socks fit perfectly, with no pressure points to obstruct the dynamics. The material Natex, a 100% plant-based nylon fibre, guarantees optimal climate management.
